

Syed Ehtisham Haider

Multan, Pakistan | haidere771@gmail.com | linkedin.com/in/ehtishamhaider | github.com/stx-haider

PROFESSIONAL SUMMARY

Machine Learning Engineer and Data Scientist specializing in computer vision, predictive modeling, and end-to-end AI pipelines. Experienced in engineering robust ML architectures from comprehensive exploratory data analysis and feature engineering to deploying real-time inference models using TensorFlow, Scikit-learn, and OpenCV. Passionate about solving real-world challenges through standalone AI systems and translating complex data into actionable business intelligence.

EDUCATION

MNS University of Agriculture

BS Information Technology

Multan, Pakistan

Expected Graduation: 2028

- Currently in 5th Semester. Actively pursuing internships and entry-level opportunities in Machine Learning, AI, and Data Science.

TECHNICAL SKILLS

Machine Learning & AI: TensorFlow, Scikit-learn, Neural Networks, Predictive Modeling, NLP

Computer Vision: OpenCV, MediaPipe, Real-time Image/Video Inference

Data Science & Analytics: Python, Pandas, NumPy, Data Preprocessing, EDA, Feature Engineering

Data Visualization & Tools: Power BI, SQL, Git, Arduino Hardware Integration, C++

EXPERIENCE

Freelance Machine Learning Engineer & Data Scientist

Jan 2025 – Present

Independent Professional

Remote

- Architect and train custom machine learning models, including deep neural networks and predictive algorithms, utilizing TensorFlow and Scikit-learn to solve complex client problems.
- Execute robust data science workflows, conducting exploratory data analysis (EDA), rigorous data cleaning, and feature engineering using Pandas and NumPy to prepare messy datasets for modeling.
- Develop and integrate advanced computer vision solutions using OpenCV, enabling automated image processing, real-time object detection, and visual data extraction.
- Translate complex predictive outputs into actionable business intelligence by designing interactive Power BI dashboards for non-technical stakeholders.

PROJECTS

MNS-UAM AI Voice Agent | *Python, RAG, FastAPI, Gemini LLM*

- Developed a functional voice-enabled campus assistant utilizing Retrieval-Augmented Generation (RAG) and Gemini LLM for intelligent institutional data retrieval.
- Successfully pitched and presented the interactive end-to-end prototype at the Punjab Youth Innovation & Incubation Competition 2026.

Solo Leveling System | *Python, OpenCV, MediaPipe, Scikit-learn*

- Developed an AI-driven real-time progression tracker and quest system inspired by RPG mechanics to monitor and gamify physical routines and productivity tasks.
- Integrated MediaPipe and OpenCV for real-time human pose estimation and activity tracking, dynamically calculating experience points and updating user stat attributes.

Nexus AI: System & Automation Agent | *Python, NLP, OS Automation*

- Engineered a cross-platform AI assistant designed to automate complex laptop and mobile workflows through natural language voice commands and deep OS integration.
- Implemented dynamic scripting and system control modules to seamlessly manage files, launch applications, and streamline daily computational tasks across devices.

Laser Security Detection System | *OpenCV, Python, Arduino*

- Designed and engineered a 100% standalone physical security system integrating Arduino hardware with a Python-based computer vision backend.
- Utilized OpenCV for real-time visual intrusion detection, writing custom scripts to trigger immediate hardware alerts with zero latency.
- Showcased the end-to-end build individually at the MUST University Multan IT Expo.
